*For Immediate Release*

### **Terramac® Plans for an Exciting Exhibit at ICUEE 2019**

*Elburn, IL* – Terramac, a leading manufacturer of innovative rubber track crawler carriers, is preparing for an exciting display at ICUEE 2019, held October 1-3 at the Kentucky Exposition Center. Terramac will exhibit its latest specialty units and technologies at booth N2030.

Terramac's most compact model yet, the RT6U designed for utility applications, will be on display with a Terex Commander 4047 digger derrick. This new specialty unit provides utility contractors an all-in-one equipment solution for safely and efficiently constructing, maintaining and restoring power. The RT6U boasts a compact footprint of 25' 8" x 8' 2", which makes it ideal for jobs that are in tight spaces but don't require the payload of a larger unit. The RT6U can also be easily loaded onto a tag trailer and hauled by line trucks from jobsite to jobsite.

Terramac's heavy-duty RT14U crawler carrier equipped with a Terex RMX 75 aerial device will also be exhibited at ICUEE 2019. This specialty utility model provides the ultimate versatility for either aerial material handling or personnel lifting. The RT14U accommodates taller lifting devices and heavyweight support equipment with superior durability, while also offering more torque and power than other crawler carriers in its class. This robust unit is especially useful for utility jobsites that are located in remote areas where it is difficult for larger, wheeled machinery to access.

Terramac will showcase the customization capabilities of its utility units. Compared to standard Terramac models, the new utility carriers are built with a unique extended frame and hydraulic mount system. This frame adjustment simplifies the mounting process to accommodate a variety of utility support equipment, including: lineman winches, vacuum excavators, boom lifts, concrete mixers and

service cranes. Terramac will also highlight the units' innovative rubber track technology and low ground pressure, which enable utility crews to easily maneuver through adverse ground conditions and climb faster on steep and hilly terrain.

The Terramac exhibit at ICUEE 2019 is located in the Lift & Haul Demo Lot (N), booth N2030. Product experts will be readily available to assist attendees, conduct product walk-arounds, and answer questions.

Terramac® LLC, based in Elburn, IL, was established to produce the world's leading crawler carrier. Units are sold through a full dealer network which offers customers easy-to-locate parts and service throughout the world. The units can be customized with support equipment to serve many industries such as pipeline, utility, mining, environmental, general construction and more.
