For Immediate Release

Terramac® Plans for its Largest Crawler Carrier Display at CONEXPO 2020

Elburn, IL, USA – Terramac, a leading manufacturer of innovative rubber track crawler carriers, is preparing for an exciting display at CONEXPO-CON/AGG 2020, held March 10-14 at the Las Vegas Convention Center. Terramac will exhibit an array of crawler carrier models and feature its advanced technologies at booth F1732.

“Our exhibit at CONEXPO 2020 will be our largest display of crawler carriers to-date,” says Jesse Whittaker, Director of Business Development at Terramac. “We’re excited to unveil a brand-new model, as well as demonstrate our units’ unique customization capabilities and rubber track technology. We look forward to a successful show with a great turn out and the opportunity to connect with Terramac dealers and customers.”

Terramac will debut its latest crawler carrier at CONEXPO. This new unit is an excellent solution for jobs located in tight spaces, and it will be on display alongside the RT6, RT9, RT14 and RT14R. Terramac’s versatile crawler carriers provide operators with maximum efficiency and easy maintenance in a variety of applications from pipeline or utility to aggregates and general construction.

The Terramac RT6, RT9, and RT14 straight frame units can be equipped with various specialized attachments. Designed to provide an unprecedented degree of customization, these carriers feature an exclusive bolt on/off system that enables an array of specialized support equipment to be mounted, such as: concrete mixers, cranes, fifth wheels, vacuum excavators, and hydroseeding units.

Built with a rugged upper frame that rotates a full 360-degrees, the Terramac RT14R is capable of hauling and dumping material at any position, even while driving. This unique rotational functionality

allows materials to be offloaded faster than standard straight frame carriers, while also minimizing environmental damage and land restoration costs.

In addition, Terramac will highlight its units' innovative rubber track technology and low ground pressure, which enable crews to easily maneuver through adverse ground conditions and climb faster on steep and hilly terrain. The advanced safety and efficiency features of Terramac crawler carriers will also be showcased.

The Terramac exhibit at CONEXPO 2020 is located in the Festival Lot, booth F1732. Product experts will be readily available to assist attendees, conduct product walk-arounds, and answer questions.

Terramac® LLC, based in Elburn, IL, was established to produce the world's leading crawler carriers. Units are distributed through a full dealer network that offers customers easy-to-locate parts and service throughout the world. The units can be customized with support equipment to serve many industries such as pipeline, utility, mining, environmental, general construction and more. To learn more, please visit Terramac.com or call 630-365-4800.
