

Announcement from Terramac

Pipeline services contractor gains greater access to worksites with newest rubber track carrier

A pipeline services contractor has found a new tracked carrier that provides access to its worksites in conditions that prohibits use of wheeled vehicles. J-Wood Contracting of Elkview, W.Va., has been renting a Terramac RT9 crawler carrier with dump bed from Shafer Equipment in Clendenin, W.Va., for a right-of-way pipeline clearing project.

J-Wood has found that the Terramac RT9's light footprint can transport sandbags and skids in spite of wet conditions that otherwise keep vehicles offsite. Even fully loaded to its 18,000-pound payload capacity, the RT9 exerts less than 4.9 psi on the ground's surface.

J-Wood Contracting was formed in 2004 to provide pipeline construction services to the natural gas industry. Since their inception nine years ago, J-Wood has installed over 120 miles of pipe ranging from 1-inch plastic to 20-inch steel.
